Apparent opioid toxicity deaths | 2016–2025

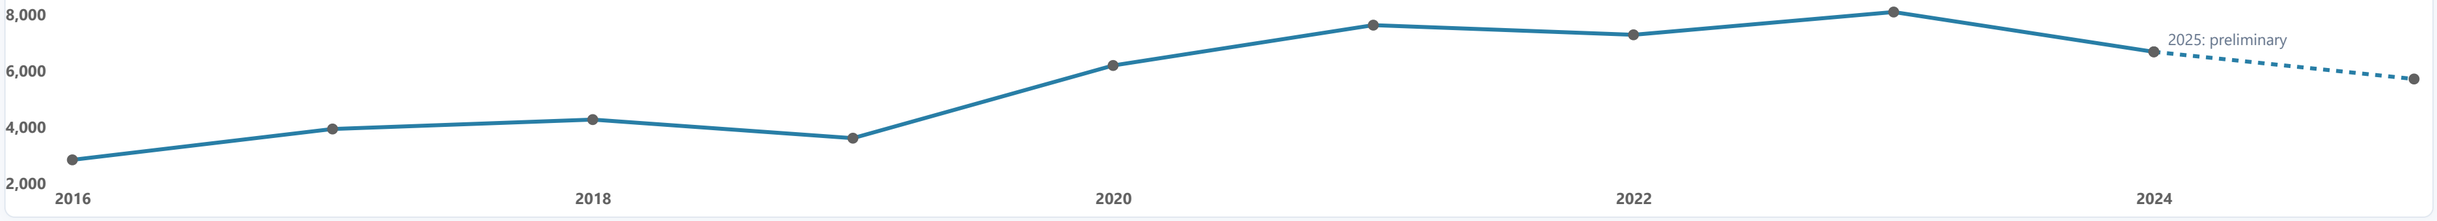

Select a year to explore mortality KPIs and provincial rates. The national trend (2016–2025) and historical rate-change comparison (2019–2024) show fixed periods.

Year: 2024

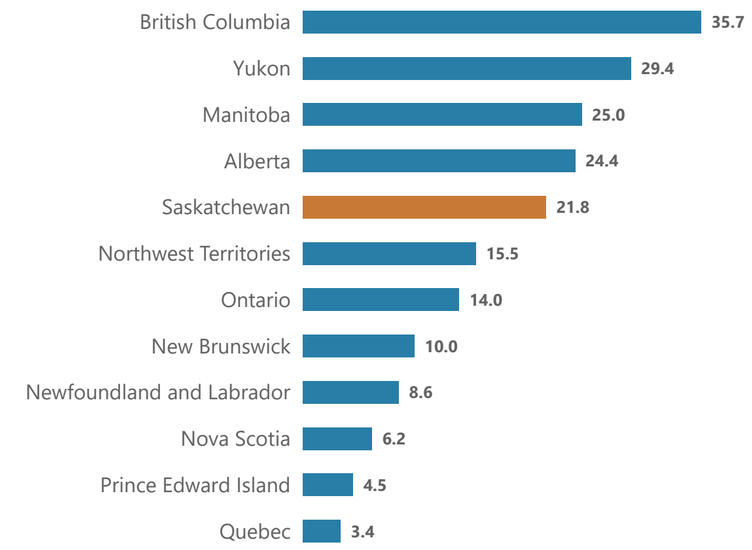

Canada: Reported deaths	Canada: Year-over-year change (%)	Canada: Crude rate per 100,000	Saskatchewan jurisdiction rank
6,669	-17.5%	16.2	5th of 12

Annual Apparent Opioid Toxicity Deaths in Canada (2016–2025)

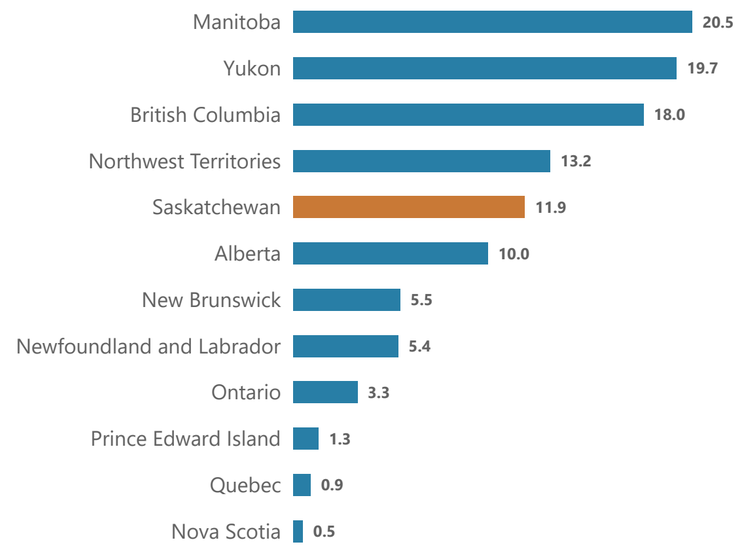

Dotted line: 2025 not directly comparable (BC and Quebec changed definitions)

Opioid Mortality Rates by Province and Territory, 2024

Change in Mortality Rate, 2019–2024 (per 100,000)

KEY FINDINGS | 2024 REFERENCE YEAR

01 | National mortality
Reported deaths peaked at approximately 8,100 in 2023 before declining 17.5% to 6,669 in 2024.

02 | Geographic differences
In 2024, Saskatchewan reported 21.8 opioid toxicity deaths per 100,000 population, ranking fifth of 12 jurisdictions with a reported 2024 rate (Nunavut not available).

03 | Change since 2019
Saskatchewan's crude opioid mortality rate rose from 9.9 to 21.8 deaths per 100,000 between 2019 and 2024, an increase of 11.9 per 100,000 (approximately 120%).

INTERPRETATION CAUTION
Crude rates account for population size but not age distribution. Jurisdictional reporting definitions and coverage vary. Recent data may be revised, and 2025 national comparisons require additional caution.

Crude mortality trends and national benchmarking

KPI cards reflect the selected year; trend charts show 2016–2024.

Year: 2024

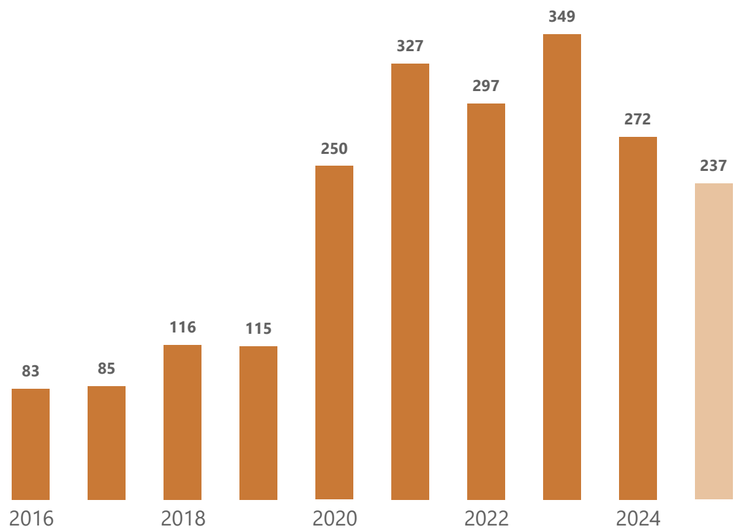

Saskatchewan: Crude mortality rate (per 100,000)	Canada: Crude rate per 100,000 (includes SK)	Rate ratio vs rest of Canada (2024) · 95% CI 1.21–1.54	Saskatchewan: Reported opioid deaths
21.8	16.2	1.36	272

Saskatchewan vs Rest of Canada | Crude Mortality Rate Ratio (2016–2024)

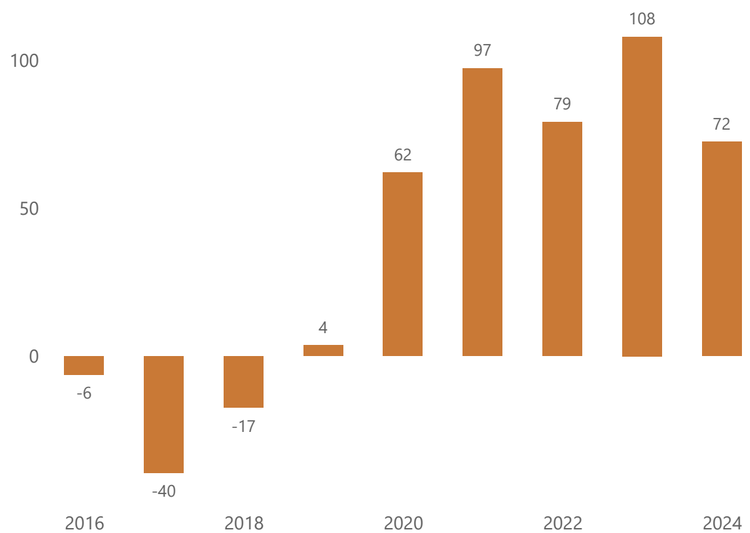

Annual Apparent Opioid Toxicity Deaths in Saskatchewan (2016–2025)

2025 figures are preliminary

Saskatchewan deaths above/below the rest-of-Canada rate, 2016–2024

KEY FINDINGS | 2024 REFERENCE YEAR

01 | Above the national rate
Saskatchewan's 2024 crude rate was 5.6 deaths per 100,000 above Canada's.

02 | Elevated relative to the rest of Canada
Saskatchewan's rate was 1.36 times the rest-of-Canada rate (95% CI 1.21–1.54), elevated under a Poisson model.

03 | Fewer deaths, still above benchmark
Deaths fell 22% from 2023 (349 → 272), yet were 72 more than expected at the rest-of-Canada rate.

LIMITATIONS

Crude rates, not age-adjusted. The benchmark gap is descriptive, not a count of preventable deaths. Confidence intervals reflect model uncertainty, not reporting differences. 2025 data are not comparable.
